**SHREDDER/GRINDER
INNOVATIONS**

Cresswood "Destroyer-Max" Drive System

Across the spectrum of industries requiring size reduction or secure destruction of materials, bottomline demands are driving performance expectations. Profitability is critical, and the impact of boosting throughput while reducing energy consumption can be enormous. That's why Cresswood has designed the "Destroyer-Max" Drive System.

Operating like a digital transmission, the Destroyer-Max Drive automatically shifts according to load demands. It functions in the *High-Energy Mode* when needed, shifting down into the cost-saving *Low-Energy Mode* in response to real-time processing requirements. Thus 'ramp-up' and 'ramp-down' transitions are virtually seamless. Results are impressive: total cost of operation is reduced; volume of marketable material is increased; and revenue is enhanced. With this innovation, you could say that we've taken our 'Destroyer' Shredders/Grinders... *to the MAX!*

FEATURES & BENEFITS:

- **More Output, Same Horsepower**
- **Energy-Efficient Operation**
- **Rapid-Response Processing**
- **Exceeds 'Soft-Start' Benefits**
- **User-Friendly Interface**
- **Integrated Control Panel**
- **Fully-Mature Technology**
